

# Performance Matters

IDENTIFY LEARNING GAPS YEAR-ROUND

Although identifying instructional gaps is essential to the beginning of the school year, it shouldn't happen only at the beginning of the school year. Rather, a healthy mixture of short formative assessments and local benchmarks (both of which come pre-made in Performance Matters) can **ensure that your staff has a clear understanding of student instructional needs all year long.**

## Pre-made items and assessments

Performance Matters comes with pre-made items and short, formative and benchmark assessments that align to math and ELA standards in your state. Supported by our highly trained team of item writers, the PowerSchool Item Bank can be used to inform instruction any time of year.

## View Progress Over Time

Performance Matters' self-discovery analytics empowers staff to better understand student progress over time, based on multiple data sets including (but not limited to) short formative assessments, local benchmarks, third-party diagnostic and summative tests, attendance, behavior, and even SEL data.

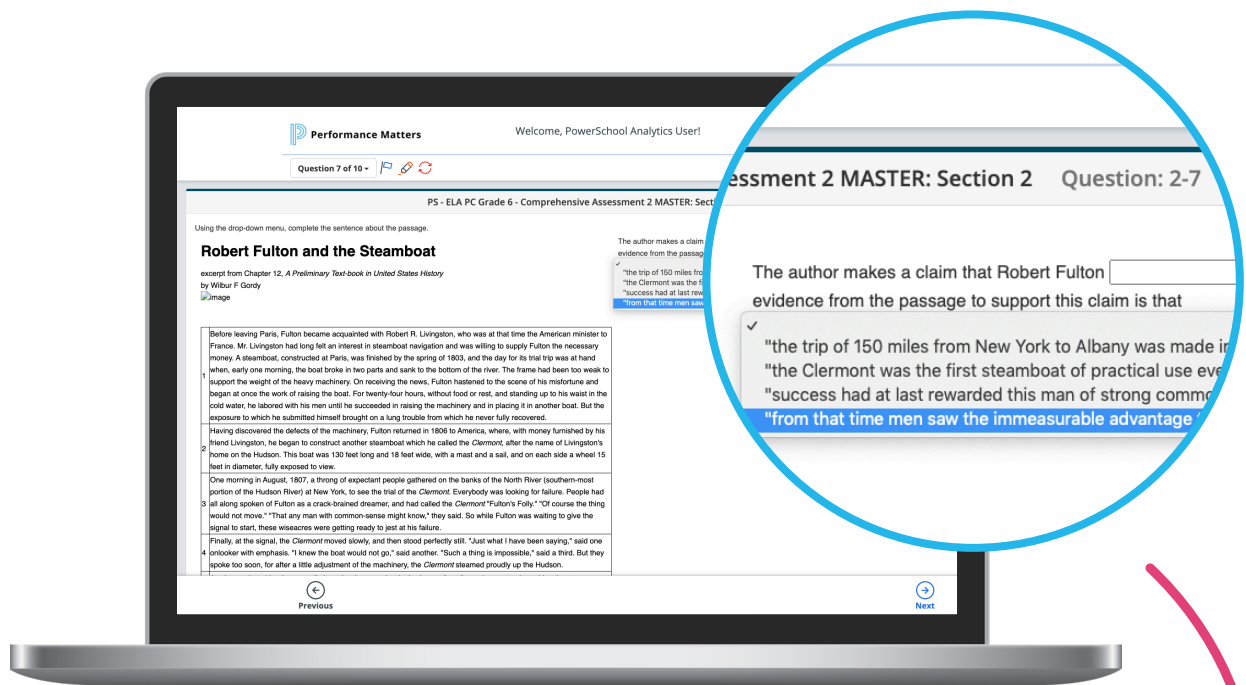

## Impactful reporting

Get a clearer view of exactly where students need help with immediate access to students' performance on assessments by item, distractor, standard, and even Webb's DOK level. You'll find it simpler than ever to streamline targeted remediation for groups of students by viewing student data by building, grade, course, and/or section.

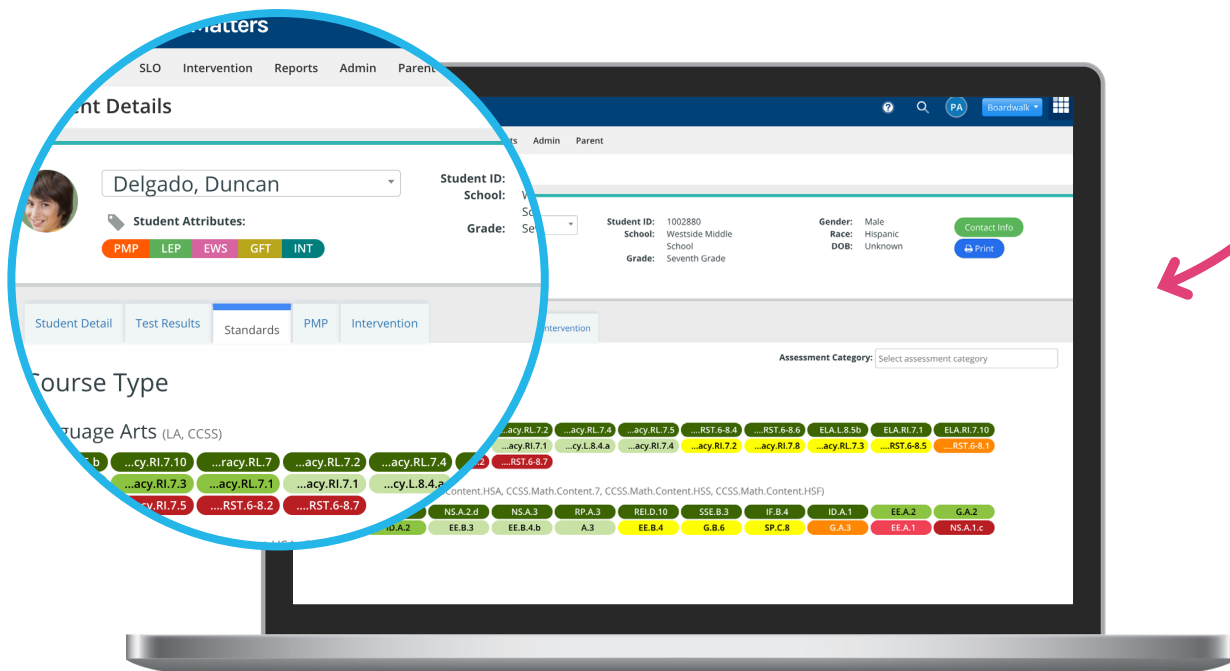

Students who receive  
personalized instruction  
perform **better than**

# 98%

of traditionally taught  
students.

Save time with pre-made short formative and comprehensive assessments aligned to your state's Math and ELA standards.

Get a clearer view of exactly where each child needs help throughout the course of the entire school year.
