

PowerSchool SIS

Scheduling & Attendance

TO SUPPORT IN-PERSON, REMOTE,
AND BLENDED LEARNING

Take confidence in knowing you can create custom schedules and accurately take attendance, whether students are in the classroom or learning remotely. PowerSchool SIS offers comprehensive and adaptive scheduling and attendance options to meet your educational readiness plans where they are, now and into the future.

Achieve Best Fit Schedules

Build schedules to meet your school or district's unique needs with flexible and robust configuration for constraints, periods, days, terms, and more. Incorporate student course requests, run test scenarios, and utilize the visual scheduler to ensure you reach your desired results before finalizing the master schedule.

Save Staff Time When Building Schedules

Maximize your administrators' time by letting our smart engine automatically build schedules that consider all vital resources. Courses, teachers, students—and ultimately the entire schedule—are balanced while still allowing for manual constraints when more control is needed.

Engage Families in Education Decisions

Allow families to take part in the scheduling process by submitting course requests online. Helpful reports assist administrators when building the master schedule, ensuring that as many student course requests as possible are satisfied within constraints and course rank.

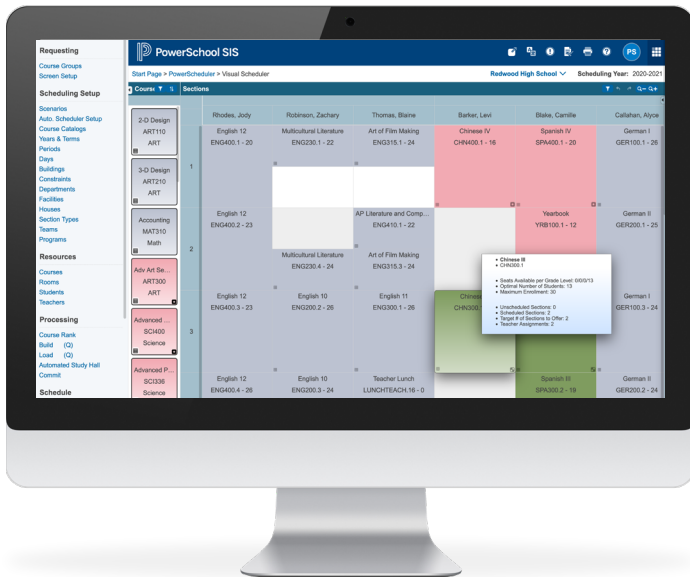

Make Attendance Tracking Simple and Flexible

Make it easy for teachers to see students grouped by in-person, remote, and blended learning tracks and mass fill the appropriate attendance codes from pre-selected options. Take attendance with ease even if learning methods shift during the course of the school year.

Identify Remote Learner Engagement

Meet your district's plans for tracking remote and hybrid learning with the ability to create unlimited attendance codes that can specifically account for remote learner participation.

Automated Master Scheduler

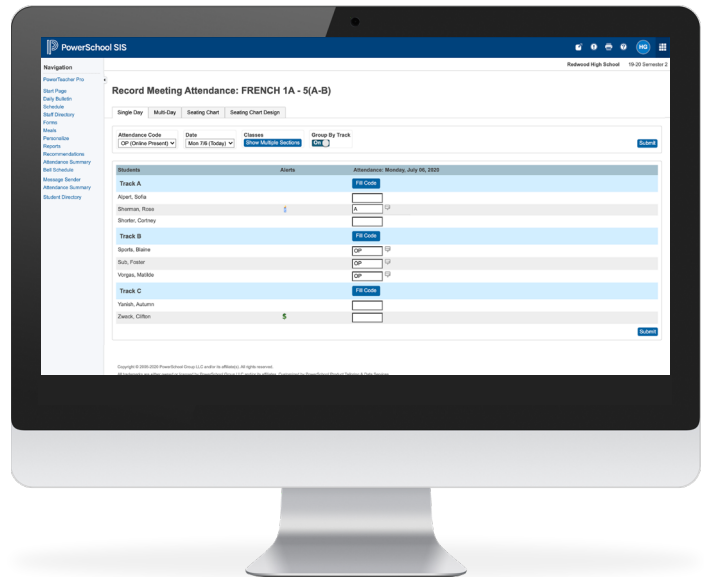

Automate the scheduling process with our simple, flexible master schedule builder designed to fit a variety of schedule types, parameters, and constraints. Minimize conflicts or experiment with scheduling scenarios without fear of losing previous schedules.

Visual Scheduler

View your schedule in a visual format that allows you to better understand the big picture and more quickly and easily identify and make needed changes to the master schedule. See how course sections fit together before you begin loading students into those classes.

Program Balancing

Manage students in special programs with ease. Ensure students in any selected program(s) are equally distributed among sections of a course.

Online Course Requests

Engage parents and students in their educational decisions with an easy online course request process that feeds directly into the master schedule building process.

Attendance Page Tracks

View your students by learning track to understand who should be in class vs. learning from home on any given day. Turn track viewing on or off on the attendance page as needed if the learning situation changes during the course of the school year.

Customizable Attendance Codes

Build attendance codes that work for your school or district's plans for attendance tracking, especially for remote or blended learners. Create codes that show students' intent to learn remotely as well as codes that show they have interacted or engaged.
