PowerBuddy for Learning is the personal assistant for teaching and learning.

PowerBuddy makes educators' lives easier by helping them easily create high-quality assignments and instructional content. Students benefit from an always-available personalized assistant to support them in the way they choose to learn.

Save Educators' Time

Powerful and simple generative AI tools help teachers write content such as passages, stories, or model texts that are grade-leveled, and appropriate for K-12 education.

Access AI with a K-12 Focus

PowerSchool's AI guiding principles make it easier and safer for educators to use powerful emerging technology. We facilitate generation of content that is human-centered, bias-resistant, and equitable to provide content to benefit all students. PowerSchool's AI is developed using responsible AI principles and fine-tuned specifically for K-12 education.

Provide Students with Choice in How They Learn

PowerBuddy gives students agency to get the help they need. Conversational prompts provide students with new ideas about various ways they can thoroughly explore a topic. Students are motivated to take ownership of their own learning so that they can achieve their best outcomes.
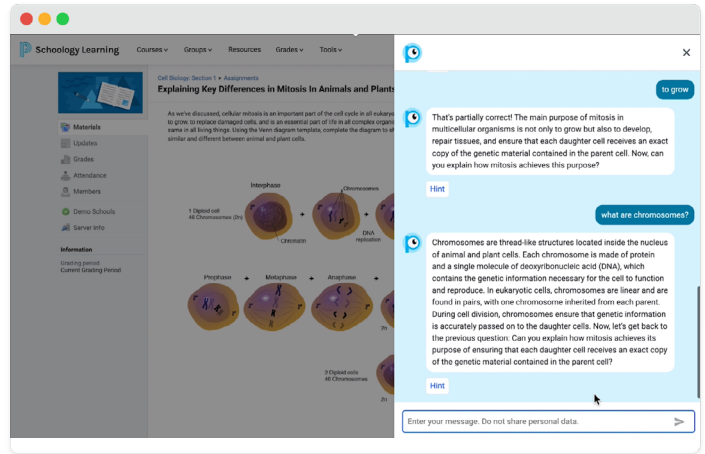

Personalized Assistance for Students

PowerBuddy bridges gaps in learning by allowing students to use an always-available conversational AI system tailored specifically to their own learning needs and grade level. PowerBuddy can learn from a wide range of data about each student to support them in the most effective way.

With a comprehensive program to protect the security and integrity of our applications—including robust cloud security, security by design, third-party penetration testing, and a responsible disclosure program—all validated by independent third-party auditors, PowerSchool demonstrates our commitment to protecting our customer's data.
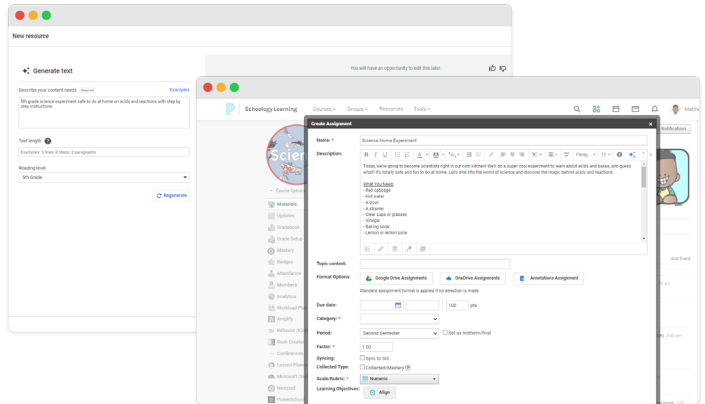

PowerBuddy for Learning Student Assistant

PowerBuddy is a conversational AI guide designed to support and motivate students as they learn. Students interact with PowerBuddy while working on assignments and receive Socratic assistance to guide their learning without providing them with the answer. Pre-generated prompts give ideas about new ways to explore a topic, or students can converse with PowerBuddy in natural language. Data informs the AI so that responses are appropriate for the student's grade level, reading level, and other unique traits.
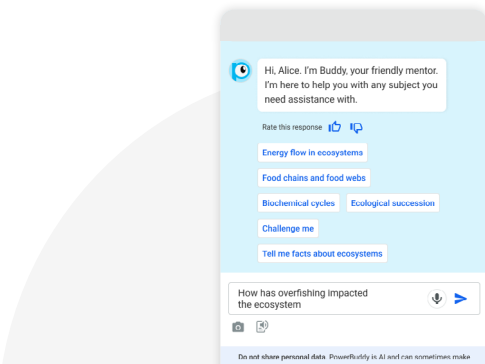

Generative AI for Content Creation

Educators can use generative AI to save time by quickly writing content such as passages, stories, or model texts as they create assignments or use the discussion board. Educators can prompt the system in natural language and can control output parameters such as length, reading level, and language.

Speech to Text

Students have access to an automatic speech recognition tool that they can select to convert spoken language into written text to aid them as they engage with PowerBuddy.
